Attorney Docket No. 54006.8014.US00  
P00-0022

**Summary of September 2, 2003 Telephone Interview with Examiner El-Arini**

The substance of independent claims 21, 28, and 30 was discussed in view of Shortes et al. (U.S. Patent No. 4,027,686) and Bryer et al. (U.S. Patent No. 6,432,214). A proposal to have the claims recite that the angle spray nozzles are directed to clean leading and trailing faces or corners of boxes held on the rotor was discussed, to distinguish the claims from the Shortes et al. patent. A proposal to amend the claims to describe that the angle spray nozzles are directed toward or away from the direction of rotation of the rotor (i.e., not toward the spin axis of the rotor), or toward upward or downward facing box surfaces was also discussed. No agreement was reached.
